*e*Research support

for the GÖTTINGEN CAMPUS

GÖTTINGEN
eRESEARCH ALLIANCE

By establishing the Göttingen eResearch Alliance, the university library and the data center have joined forces to support researchers and strengthen digital research infrastructures at the Göttingen Campus. To achieve this, we closely cooperate with our university partners such as the medical center and the university's research data officer.

As your contact point for the campus we, the eResearch Alliance Team, assist you in selecting and using digital technologies and methods suitable for your research. Our support offer includes, among others, topics like research data management, proposal consulting, data visualization, statistics or high-performance computing.
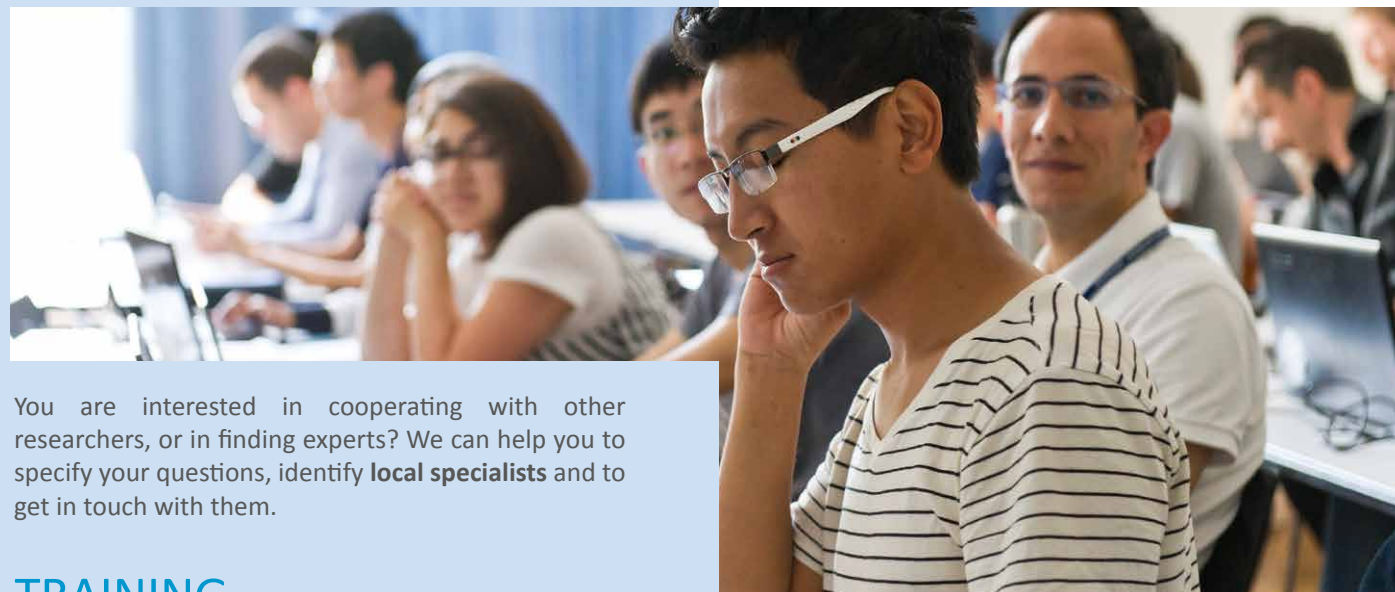

Our mission is

- Informing and advising researchers on eResearch issues
- Training of young researchers
- Improving and extending campus services and tools

Our main services are

- Consulting on best practice eResearch solutions
- Supporting your project's data management
- Identifying useful services and technologies
- Connecting you to experts at the Göttingen Campus
- Providing eResearch information resources

CONSULTING

In case you would like to get consulting with respect to data management, data publishing, long-term preservation, available infrastructures, tools or services **for all phases of your research**, please contact us. In cooperation with our partners, we support you in **finding the best solutions** for your eResearch questions and requirements.

You are interested in cooperating with other researchers, or in finding experts? We can help you to specify your questions, identify **local specialists** and to get in touch with them.

TRAINING

If you are interested in information events, trainings or workshops for your group, we will organize such events **tailored to your needs** or provide you with training materials. We cover topics like:

- Storing, archiving, sharing and publishing datasets
- Writing a data management plan,
- Making best use of campus services,
- Developing backup strategies, or
- Managing research results.

DEVELOPING

New technologies can improve the research process by creating new ways of exploring a particular domain. You need an adapted software tool, a web-based user interface, or a database according to **project specific requirements**? Browse our service portfolio and contact us for individual solutions.

YOUR PROJECT PARTNER

The Göttingen eResearch Alliance is actively involved in enhancing the current digital campus infrastructure.

If you need specific and more intensive support in data management within a research project, please contact us to discuss how to cooperate with the eResearch Alliance, e.g. as project partner or as service developer for urgent requirements.
